In his latest book, *The Fight for the World's Most Critical Technology*, best-selling author Richard McGregor tells the inside story of the race to control the technology that powers our modern world: semiconductors.

Semiconductors are the tiny chips that make our computers, smartphones, and other electronic devices work. They are also essential for military and industrial applications. As a result, they have become a key battleground in the ongoing trade war between the United States and China.

McGregor's book provides a comprehensive overview of the semiconductor industry, from its humble beginnings in the 1950s to its current status as a global powerhouse. He traces the rise of China's semiconductor industry and its impact on the global market.

McGregor also examines the U.S.-China trade war and its impact on the semiconductor industry. He argues that the trade war has exacerbated

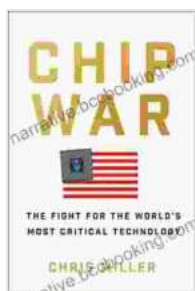

tensions between the two countries and made it more difficult for companies to do business.

The Fight for the World's Most Critical Technology is a timely and important book. It provides a clear and concise explanation of the semiconductor industry and its importance to the global economy. McGregor's book is also a valuable resource for anyone who wants to understand the U.S.-China trade war and its implications for the future.

Key Points

- Semiconductors are essential for modern technology.
- China is a major player in the semiconductor industry.
- The U.S.-China trade war has had a negative impact on the semiconductor industry.

The Fight for the World's Most Critical Technology is a must-read for anyone who wants to understand the semiconductor industry and its importance to the global economy. McGregor's book is a valuable resource for anyone who wants to understand the U.S.-China trade war and its implications for the future.
